WPI; 2002-188744/24. N-PSDB; AAD29681. New human G-protein coupled receptor polypeptide for diagnosis, prevention and treatment of cell proliferative, neurological, cardiovascular, gastrointestinal, autoimmune/inflammatory, and metabolic disorders

Claim 1; Page 133-134; 150pp; English.

The invention features to mover numan verponent coupled receptors (ucket) and their encoding polymucleotides. GCREC is useful as an immunogen for preparing monoclonal and polyclonal antibodies. GCREC is useful for diagnosing, treating and preventing a cell proliferative disorder (e.g., cheating and preventing a cell proliferative disorder (e.g., cheating and preventing a cell proliferative disorder (e.g., proliferative disorder). Alzheimer's disease, Pick's disease, Huntington's disease, Parkinson's CG disease), a cardiovascular disorder (e.g., atherosclerosis, hypertension, myocardial infarction), gastrointestinal disorder (e.g., gastritis, cirrhosis, Crohn's disease), an autoimmune/ inflammatory disorder (e.g., cirrhosis, crohn's disease), an autoimmune/ inflammatory disorder (e.g., cirrhosis, asthma, crohniques, and to analyse the proteome of a tissue or cell transpening techniques, and to analyse the proteome of a tissue or cell type. GCREC is useful for creating knockin humanised animals or transpenic animals to model human diseases, in somatic or germline gene conterpray, to generate a transcript image of a tissue or cell type, for therapy, to generate a transcript image of a tissue or cell type, for detecting differences in the chromonal location due to translocation, inversion, etc., among normal, carrier or affected individuals, and as the proteor or probes for mapping naturally occurring genomic sequences. CG TREC is useful in Southern or northern analysis, dot blot or other communication multiformat enzyme linked immunosorbant (ELISA)-like assays, and in The invention relates to novel human G-protein coupled receptors (GCREC)

888	microarrays utilising fluids or tissues from patients to detect altered GCREC expression. The present sequence is human GCREC-15

New G protein-coupled receptor related polypeptides and polymucleotides for diagnosis, prevention and treatment of metabolic, neurodegenerative, retinal, immune, hematopoietic disorders, diabetes, obesity and

2001-626379/72.

P-PSDB; AAM47212

The present invention provides the protein and coding sequences of novel human G-protein coupled receptors, designated NoV1, NoV2, NoV3, NOV4,

Claim 8; Page 46; 194pp; English.

infections,

э.
;
NOV5a, NOV5b, NOV6a, NOV6b, NOV7, NOV8a, NOV8b, NOV9 and NOV10. These can be used in the treatment of NOVX related diseases, including cancer, metabolic, neurodegenerative, immune, haematopoietic, devalopmental, retinal, feeding, neurological and psychotic diseases and disorders and infections. The present sequence is the NOV5b coding sequence, the gene for which is found on chromosome 2. The NOV5b protein shares homology
                                                                                                                                                                                                                                                                                                                                                                   180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         284

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 872                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             932 ccaacgracracacacacaragasasacacararararacacacacasacarararacara                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cerrecerececrrecerrecerrecerringreracedaagareraceagecea                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            992 rgaacroscracerrargccaarrcrocerrcaacccgcrcarcrac 1038

Ellerman K; Spytek KA; New NOVX polypeptides and polynucleotides, useful for treating or preventing a NOVX-associated disorder or a pathological state in a subject, particularly a human, e.g. cardiomyopathy, atherosclerosis, cancer or diabetes. cok JP, lepley DM, Burgess CE, Mishra V; Padigaru M, Shimkets RA, Zerhusen BD, Sp .h V. Macdougall J, Stone D, Gunther E, 9; Page 46; 227pp; English. Alsobrook JP, Li L, Padig Gerlach V, WPI; 2002-444172/47. P-PSDB; ABB78809. Grosse WM, Kekuda R, I Edinger S, Claim

The present invention describes novel human proteins designated NOVX (where X is 1, 2a, 2b, 2c, 2d, 3, 4, 5, 6a, 6b, 7, 8, or 9). NOV1 is a tyrosine-protein kinase 6-like protein; NOV24 are keratin 4-like protein; NOV35 is a collagen-like protein; NOV44 is a cystatin B-like protein; NOV95 is a serotohin receptor-like protein; NOV65 and NOV65v are cold inducible glycoprotein 30-like protein; NOV9 is a matrilin-2-like protein; NOV9 is a leukcyte surface antigen (CD53)-like protein; and cold inducible glycoprotein 30-like protein; NOV9 is a tyrosine kinase-like protein. NOVX sequences have cytostatic, antiarteriosclerotic, cardiovascular, antidiabetic, immunosuppressive and continuous can be used in therapeutics, particularly for treating, sequences can be used in therapeutics, particularly a thuman. These disorders include cardiomyopathy, atherosclerosis, a disorder related to cell signal cardiomyopathy, atherosclerosis, a disorder related to cell signal processing and metabolic pathway modulation or diabetes. The NOVX sequences are also useful for determining the presence of or predisposition to a disease associated with altered levels of NOVX collypeptide or nucleic acid, particularly cancer. The NOVX sequences are expecially useful in therapeutic or prophylactic applications for a neoplastic or neuropagated isorders, and in the treament of experience of the processing and metabolic pathway and in the treament of experience of the processing and the presence of the particularly cancer. The NOVX sequences are necessarially are acid, particularly cancer. The NOVX sequences are necessarially and in their application or interest and in the presence of the processing and interest leaded to the presence of the necessarial particularly and in the treatment of a material particularly and in the presence of the particularly and in the presence of the particularly and the presence of the nove of the particularly and the presence of the particular and the particular and the particular and the particular and the particular adenocarcinoma, lymphoma, prostate cancer, uterus cancer, immune response, AIDS, asthma, Crohn's disease, multiple sclerosis or Graft versus host disease. The present sequence encodes the human NOV5 protein from the present invention. NOV5 is located to chromosome 2

The invention relates to novel human G-protein coupled receptors (GCREC) and their encoding polynucleotides. GCREC is useful as an immunogen for preparing monoclonal and polyclonal antibodies. GCREC is useful for diagnosing, treating and polyclonal antibodies. GCREC is useful for diagnosing, treating and polyclonal artibodies. GCREC is useful for hepatitis, psoriasis, cancer), a neurological disorder (e.g., palepsy, Alzheimer's disease, Pick's disease, Huntington's disease, Parkinson's disease), a cardiovascular disorder (e.g., atherosclerosis, hypertension, myocardial infarction), gastrointestinal disorder (e.g., gastritis, cirrhosis, Crohn's disease), an autoimmune/ inflammatory disorder (e.g., acquired immunodeficiency syndrome (ALDS), allergy, anaemia, asthma, rheumatoid arthritis), a metabolic disorder (e.g., diabetes, obesity, osteoporosis), and viral infactions. GCREC is useful in a number of drug screening techniques, and to analyse the proteome of a tissue or cell type. GCREC is useful for creating knockin humanised animals or transport animals to model human diseases, in somatic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting differences in the chromosomal location due to translocation,
                                                                                                                                                     New human G-protein coupled receptor polypeptide for diagnosis, prevention and treatment of cell proliferative, neurological, cardiovascular, gastrointestinal, autoimmune/inflammatory, and metabolic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  inversion, etc., among normal, carrier or affected individuals, and as hybridization probes for mapping naturally occurring genomic sequences. GCREC is useful in Southern or northern analysis, dot blot or other membrane-based technologies, in PCR technologies, in dipstick, pin, multiformat enzyme linked immunosorbant (ELISA)-like assays, and in microarrays utilising fluids or tissues from patients to detect altered GCREC expression. The present sequence is human GCREC-15 cDNA

The invention relates to isolated human G-protein coupled receptor (GCREC) polypeptides and their biologically active fragments. GCREC and protein is useful in treating a disease or condition associated with an increase or decrease in expression of functional GCREC. The GCREC's are useful in the diagnosis, treatment and prevention of cell proliferative disorders (cancer, leukaemia, melanoma); neurological disorders (stroke, epilepsy, Parkinson's disease, dementia, Alzheimer's disease); autoimmune inflammatory disorder (thyroiditis, haemolytic anaemia, AIDS, multiple sclerosis); cardiovascular disorder (atherosclerosis, angina pectoris), metabolic disorders (diabetes); viral inflections (herpes virus) and in the assessment of the effects of exogenous compounds on the expression of the nucleic acid and amino acid sequences. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isolated human G-protein coupled receptor polypeptides and the use of these sequences in the diagnosis, treatment and prevention of diseases and in the assessment of exogenous compounds on the expression of the
